

PRODUCT SUPPORT BULLETIN

BULLETIN NO. 348

DATE: **January 18, 2002**

MACHINE: **Model C Spike Driver**
NETP Chemical Tie Plugger
TRIPP

SERIAL

NUMBER(S): **Model C: 410201 – 410325 (except BNSF Machines)**

NETP: 510013 – 510014

TRIPP: 760126 - 760136

SUBJECT: **Electric Emergency Pump Wiring (24-volt)**

The optional Electric Emergency Pump on some of these machines was wired using #10 AWG wire for the power and ground connections. The current draw of the pump motor exceeds the current rating of this size wire. **It is highly recommended that the Emergency Pump be rewired using #0 AWG to replace the #10 AWG. The following wires must be changed: Starter to Power Relay; Power Relay to +24V terminal on Motor; GND terminal on Motor to Pump Capscrew.** Failure to rewire these pumps will cause circuit failure.

Wire of the correct size may be obtained for no charge by contacting the NORDCO Service Department at 1-800-445-9258. Please be sure to have the serial number of the machine available when calling.
